New Feature Spotlight: Tableau Desktop 2020.2

A Tableau Education Services Webinar

C_____ G_____ | Senior Instructor

May 26, 2020 | c_____@tableau.com

*Please ensure your lines are muted. We will begin at 11.00am PST*
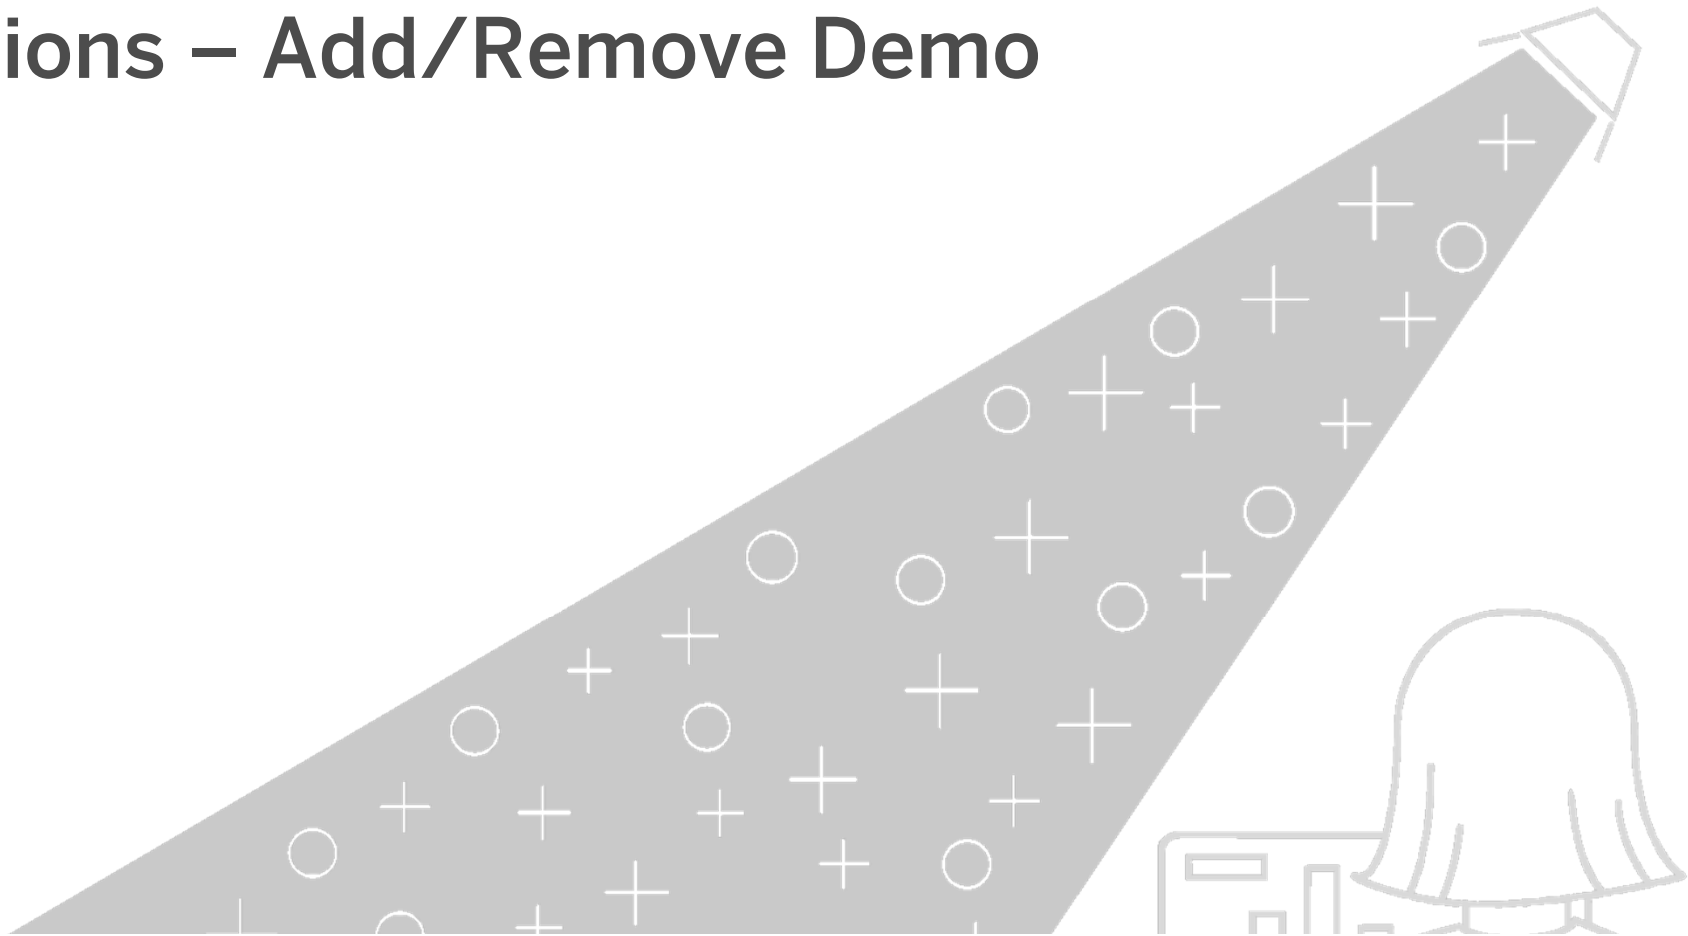

Set Actions – Add Remove & Set Control

Set Actions – Add/Remove

- This Set Actions feature gives your users the ability to incrementally add or remove values from the sets in the view.

- Users can choose which marks to include or exclude from a set.

- No longer necessary to go to edit mode to revise the contents of a set—just click a mark to add or remove

Set Actions – Add/Remove Demo

Set Actions – Set Control

- Set Control is complementary to the Add/Remove feature.

- Whereas **Add/Remove** allows users to select set members directly in the viz, **Set Control** allows users to choose set members from a list.

- Users can use one or the other, or both together, depending on their needs.
